

The Visual Syntax *Cheatsheet.*

Every client-ready AI photo is engineered from the same six ingredients. Stop gambling with prompts — control the ingredients, control the outcome.

THE 3 RULES

RULE 1

Every image has 6 ingredients

Style, Subject, Action, Scene, Camera, Brand. Control these, control the outcome.

RULE 2

Each ingredient = words or pictures

Use reference images for accuracy.
Use text where you want the model to interpret.

RULE 3

Order matters — first is strongest

The model pays the most attention to what comes first. Lead with what matters most.

THE 6 INGREDIENTS

INGREDIENT	THE QUESTION	WHAT TO DEFINE
1 STYLE	<i>What kind of photo is this?</i>	Editorial, UGC, catalog, luxury, vintage, paparazzi...
2 SUBJECT	<i>What or who is the hero?</i>	Product details, model demographics, key features
3 ACTION	<i>What's happening?</i>	Pose, expression, interaction type
4 SCENE	<i>Where are we + how's it lit?</i>	Environment, props, light source & direction
5 CAMERA	<i>How are we shooting it?</i>	Lens, aperture, framing, angle
6 BRAND	<i>How does it feel like them?</i>	Hex colors, temperature, visual identity

PROMPT STRUCTURE

[STYLE] Editorial photography, luxury aesthetic...
 [SUBJECT] Woman in her 20s holding the cream jar [image1]...
 [ACTION] Applying to cheek, eyes closed, serene expression...
 [SCENE] Marble bathroom, soft window light from left...
 [CAMERA] 85mm, f/1.8, medium close-up, shallow depth of field...
 [BRAND] Warm palette, #B59C7E tan, organic textures...

CAMERA RECIPES · THE 80/20

GOAL	RECIPE
Premium hero	85mm + f/1.8 + soft studio
Authentic lifestyle	50mm + f/1.8 + window light
Catalog / detail	85mm + f/8 + soft studio
Ultra-luxury	135mm + f/2.8 + studio

THE 3 LIGHTING SETUPS

SETUP	FEEL	BEST FOR
Natural window	Authentic, real	Lifestyle, UGC
Soft studio	Professional	Products, reflective
Golden hour	Warm, aspirational	Beauty, fashion

CRITICAL · Reflective products (glasses, jewelry, metal) = always soft studio with fill light. Golden hour ruins reflective surfaces.

MULTIMODAL ANCHORING · WORDS VS PICTURES

→ **Product accuracy:** anchor with a reference image [image1] — never describe a product you can show.

→ **Specific pose:** use a pose reference photo instead of describing limbs and angles.

→ **Style consistency across a set:** reuse one style anchor image for the whole batch.

→ **Golden rule:** don't over-describe what your images already show. Text fights references.

BEFORE YOU GENERATE

1 Write the six ingredients down **before** opening the tool. Most failures happen before generation.

2 Decide words vs pictures for each ingredient (Rule 2).

3 Put the ingredient that matters most for this shot **first** (Rule 3).

4 Generate, then QA against the source: materials, texture, colors, proportions, scale.

Put Visual Syntax to work.

Awa, the AI creative assistant inside Dezygn, speaks Visual Syntax natively — you describe the shot, it engineers the prompt. Free plan, 50 credits, no card required.
